

Fast Track to Cleaner Urban Air.

ABOUT

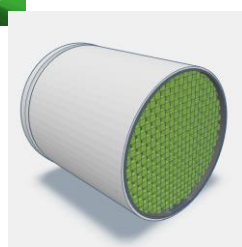

AeroSolfd is a Horizon Europe Innovation Action supported by the European Commission under grant agreement No 101056661. The project is focusing on developing market-ready retrofit solutions to immediately decrease the harmful effects on health and the environment of transport-related emissions with effective filtration devices. It will deliver affordable, easy-to-install and environmentally friendly retrofit solutions to reduce tailpipe and brake emissions and pollution in (semi-)closed environments.

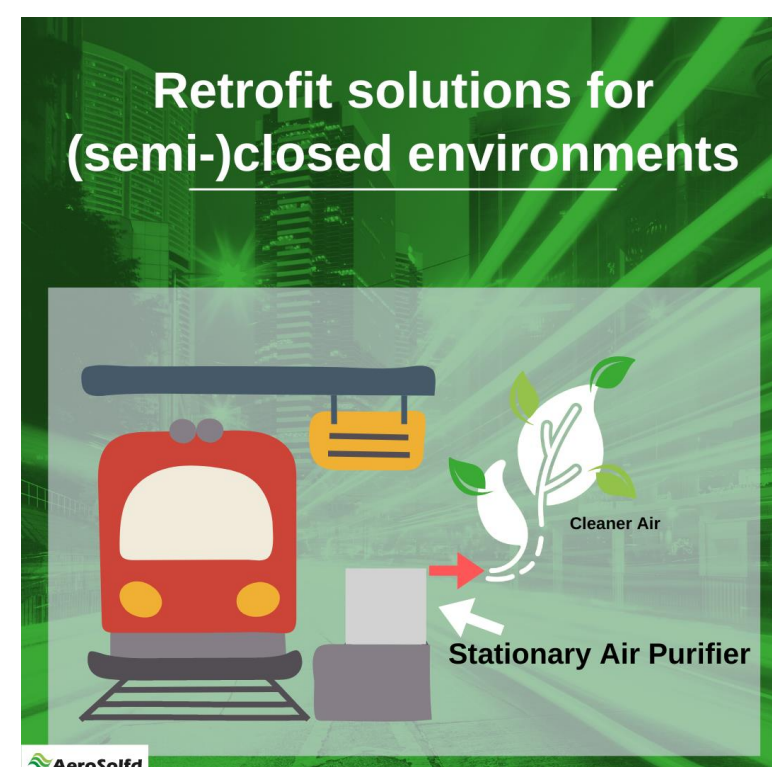

AEROSOLFD SOLUTIONS

Reducing tailpipe emissions

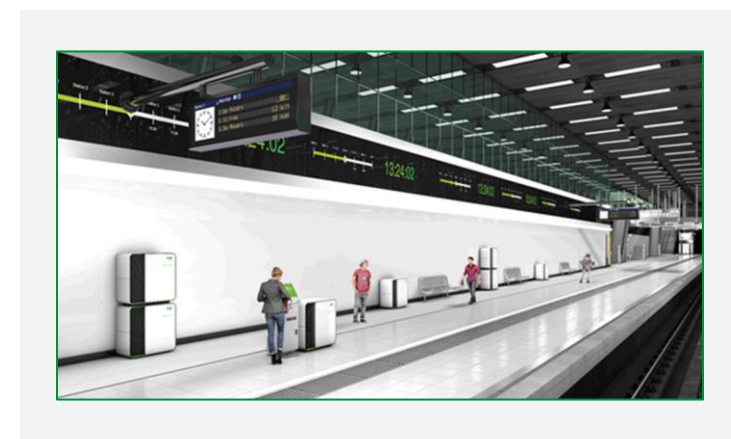

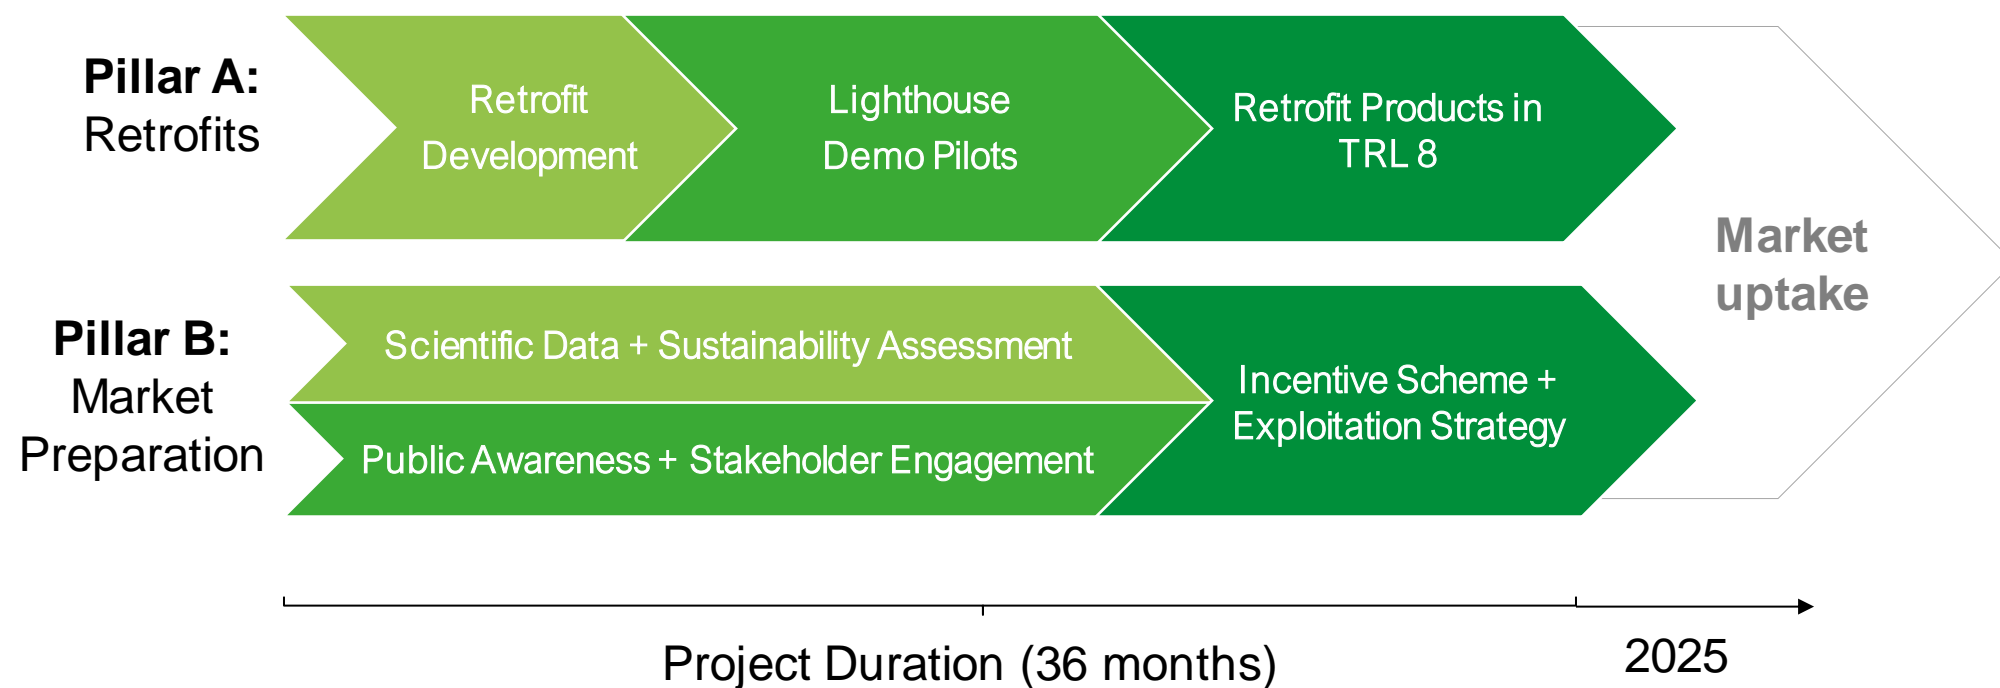

Reducing brake emissions

Reducing pollution in (semi-)closed environments

METHODOLOGY

SUMMARY

Retrofits are key enabling technologies during the transition to zero-exhaust vehicles by electrification until reduced non-exhaust measures are implemented and even beyond. AeroSolfd will put special focus on increasing public and political awareness of the harmful emissions, and the exposure of fine particles in (semi-)closed spaces on the environment and people's health. The project will provide policymakers with recommendations on how to develop incentive schemes for the quick market uptake of these retrofit technologies.

PARTNERSHIP
