# Demonstration Project of Diesel Particulate Filter Retrofit in Shenzhen

WANG Yanjun

Vehicle Emission Control Center  
Ministry of Environmental Protection

March,15,2018

# Outline

- **Background**
- **Preparatory Work**
- **Project Progress**
- **Policy Proposal**

# Background(1)

- Shenzhen aims to reach the second phase of WHO in 2020. To achieve this goal, PM<sub>2.5</sub> needs to drop 1 ug/m<sup>3</sup> per year from the current 29.8 ug/m<sup>3</sup>( in 2015) to 25 ug/m<sup>3</sup> in 2020.
- Shenzhen has formulated “Key measures for prevention and control of air pollution in 2016 - 2020 ”, adopted 23 key measures for 8 major areas, paying more attention on vehicles;

## Shenzhen Ecosystem

### 8 Major Areas

Population Control
Clunker Replacement
DPF Retrofit
New Energy Vehicle
Emission Control for Ports and Vessels
Boiler Retrofit
Denitrification Retrofit for gas power plant
VOC Control

## Background(2)

- April 2015, atmospheric PM2.5 source analysis result announced by Shenzhen Municipal Government shows that motor vehicle emission is the primary source of pollution in Shenzhen, accounting for about 41% of total;
- Shenzhen port cargo developed (the world's third largest container port), the population of diesel vehicles is relatively more, mainly in the freight logistics and other industries, which is one of the important sources of PM2.5.

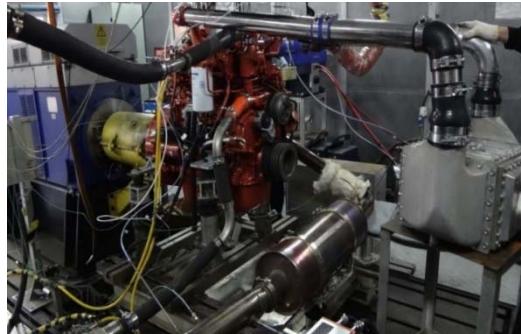

# Off-road machineries

- Old diesel engine occupied 60% of total; Only 30% could meet China Stage II emission standard.
- July 1, 2016, Shenzhen began to implement the "Limits and measurement methods exhaust smoke from in-use diesel engine of non-road mobile machinery", the optical absorption coefficient of non-road mobile machinery shall not exceed 0.5 / m<sup>-1</sup>;
- According to the relevant provisions of Special Economic Zone, unqualified non-road mobile machinery shall not enter Shenzhen, Offenders will be punished by ¥10,000 to ¥100,000(RMB).

# Retrofit Procedure

select 200 diesel vehicles from transport,  
postal, and other industries, 40 NRMMs  
from ports and construction sites.

bench test for after treatment products  
(before the project bidding)

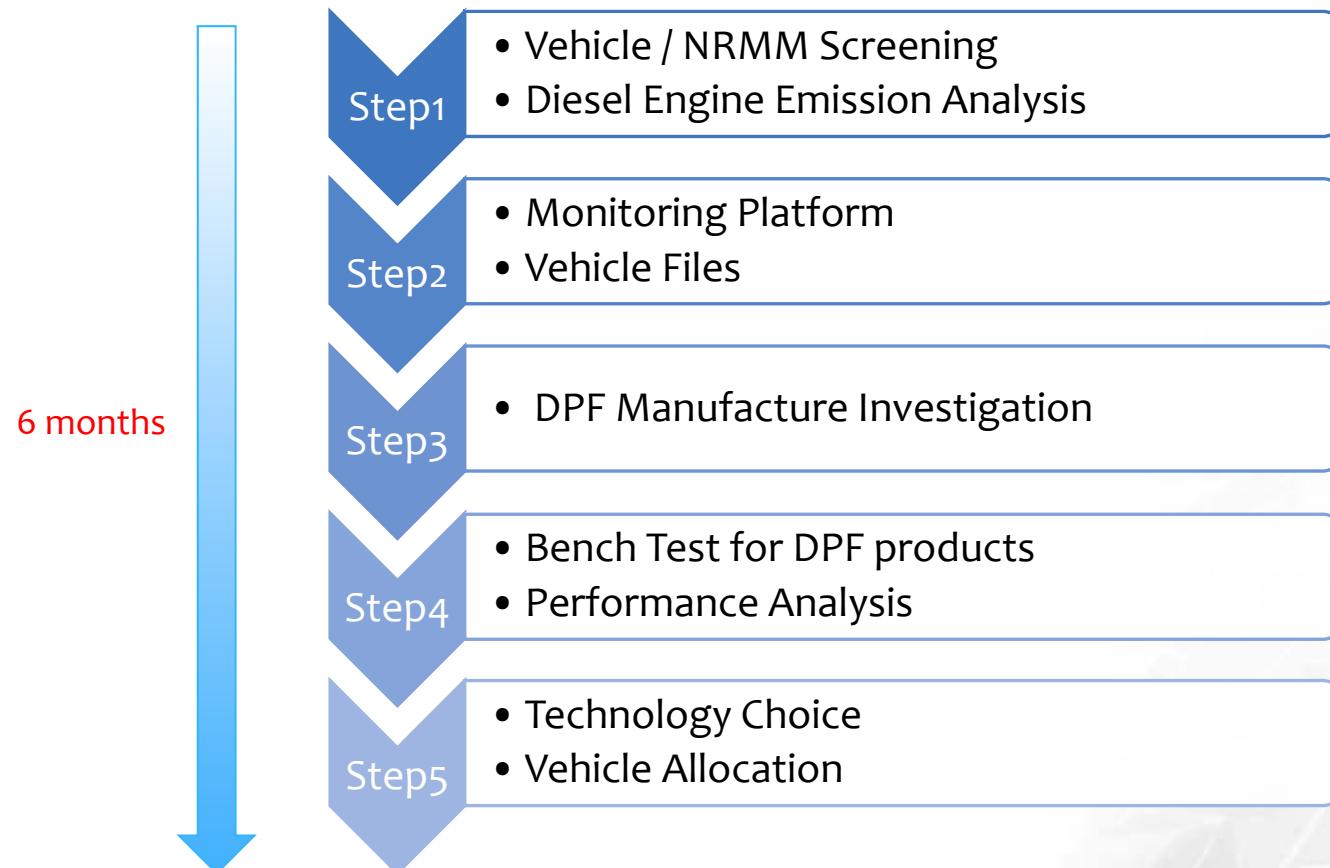

initial PN test (after DPF installation)

DPF monitoring and PN durability test  
for a operating period of 3 months or  
5000 km

data analysis, comprehensive plan and  
technology methods for large-scale  
retrofit in Shenzhen

# Preparatory Work

# Preparatory Work

## Vehicle / NRMM Screening

- Vehicles mainly involved in public transport, postal, and other industries;
- NRMM included excavators, loaders, rollers, bulldozers and other construction machinery;

### Information Collection:

- fleet information
- vehicle models
- emission technology
- initial exhaust test (smoke at free acceleration )
- fuel consumption
- oil consumption

### Objectives:

scientific and rational choice of after treatment devices under different operating conditions

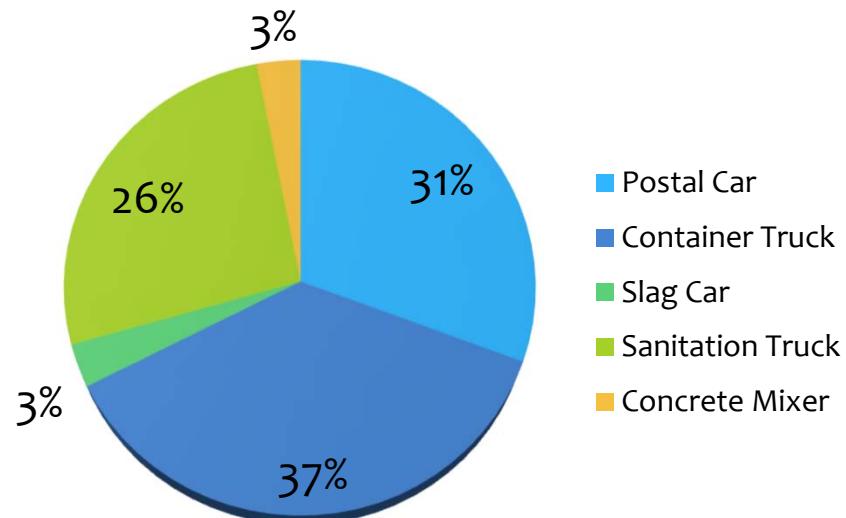

# Vehicle Screening

- Initial smoke test: total 283 diesel vehicles, 153 qualified
- Screening Standard: optical absorption coefficient < 2.0 / m-1
- Vehicle information: basic information, smoke at idle, smoke at free acceleration, etc.
- Photos: installation Space, test data, vehicle nameplate, etc.

# Screening Results

Vehicle Type

- Postal Car
- Container Truck
- Slag Car
- Sanitation Truck
- Concrete Mixer

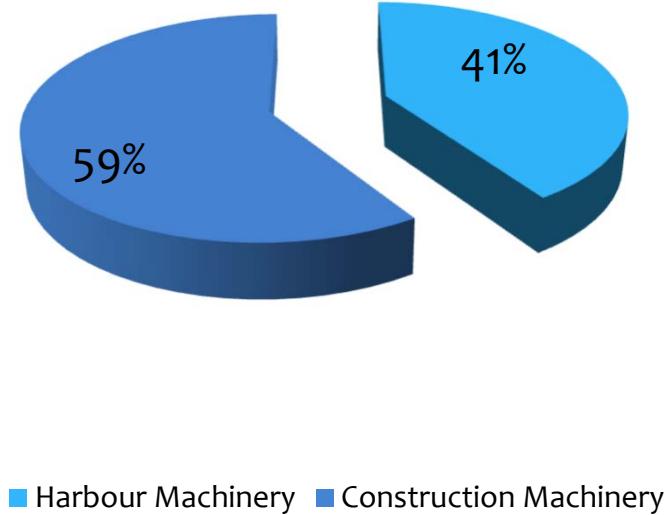

# Machinery Screening

- Initial smoke test: total 127, 52 qualified
- Screening Standard: optical absorption coefficient < 2.5 / m- 1
- Machinery information: basic information, smoke at idle, smoke at free acceleration, etc.
- Photos: installation space, test data, machinery nameplate, etc.

# Manufacture Investigation

## 环境保护部机动车排污监控中心文件

车控函〔2016〕06号

### 关于开展移动源颗粒物治理技术 环保信息公开工作的通知

各有关单位：

为落实《大气污染防治法》的有关要求，对不能达标排放的在用重型柴油车、非道路移动机械进行污染治理，为各地环保部门治理高排放移动源提供技术服务，我中心拟开展移动源颗粒物治理技术环保信息公开工作。

本工作将按照公平、公正、自愿的原则对颗粒物治理装置进行技术评估，并按照信息公开的要求发布技术评估结果。具体流程及要求见附件。

联系人：吉 喆

联系电话：010-84916280-8231

### The Letter of Manufacture Investigation Program

#### Focus

- ✓ DPF Manufacturers Research (production capacity, R&D capability, quality assurance and after-sales service, etc.);
- ✓ DPF Performance Indicators (PN, PM, NO<sub>2</sub>, normal pollutant, secondary pollutant, etc.);
- ✓ Equipment Bidding (business, maintenance terms, etc);

# Investigation for DPF quality control ability

## 车辆 DPF 改造示范试验合作协议

甲方: \_\_\_\_\_

乙方: \_\_\_\_\_

### 一、基本情况介绍

为有效治理机动车污染，加大空气污染治理力度，落实市政府办公厅《关于研究大气环境质量提升工作的会议纪要》（2015 年第 72 号）要求，深圳市人居环境委委托环境保护部机动车排污监控中心开展柴油颗粒捕集器（DPF）安装示范评估项目，通过该项目将建立一套有效柴油车污染控制技术评估方法和体系，为深圳柴油车污染后处理控制技术选择和评估提供技术支持。示范实验包括了在用柴油车和非道路移动机械改造示范试验工作。通过该评估项目，将逐步划定深圳市移动污染源低排放控制区域，逐步实现在深圳市范围活动的所有柴油车或非道路工程机械必须加装 DPF 工作。

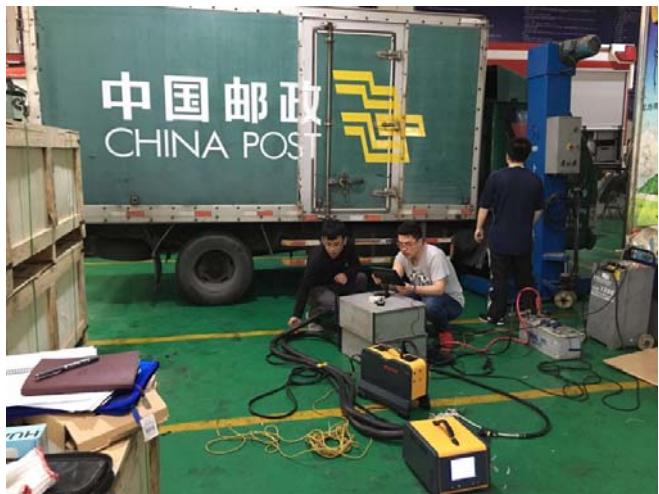

### 二、参与示范试验各方职责和义务

此次深圳市柴油颗粒捕集器安装示范评估项目共有管理部门、DPF 供应商、车辆所有者/设备使用者三方参与，并以自愿合作的形式进行。

User Agreement

# PEMS Test for PN

- ✓ According to the “Limits and measurement methods for exhaust smoke from C.I.E.(Compression Ignition Engine) and vehicle equipped with C.I.E. ”(National Standard: GB3847-2005),
- ✓ PEMs equipments (Nanomet3, TSI3795, Semtech) were used to measure the particulate number of exhaust from all vehicles and NRMMs that involve in the project.
- ✓ Initial PN test after DPF installation
- ✓ Durability test after a operation period of 3 months or 5000km.
- ✓ The removal efficiency shall not be less than 95%

# Nanomet3

## FEATURES AND BENEFITS

- The portable particulate matter test system is used to measure the amount and size of nanoparticles in the range of 10-700nm.
- Compact, easy to carry, durable;
- Equipped with 12V DC battery operation function, low power consumption;
- Suitable for vehicle exhaust particle emission concentration measurement (1000-300,000,000 particles/cm<sup>3</sup>), short response time, suitable for transient testing;

## Typical Applications

- The testo NanoMet3 portable particle counter offers high-precision measurements over a large concentration range and is therefore very suitable for a wide range of applications:
- Particle measurement according to RDE for type approval in accordance with Euro 6c
- Particle determination for the research and development of particle filters
- Characterization of particle emissions from gasoline and diesel engines

# TSI 3795

## FEATURES AND BENEFITS

- ✓ Sampling probe with integrated dilution
- ✓ Water removal via water trap and silica desiccant dryer
- ✓ Built-in catalytic stripper for volatile particle removal
- ✓ Wide environmental operating range
  - -10° C to 40° C
  - 0 - 3,000 m
- ✓ Concentrations up to 5,000,000 particles/cm<sup>3</sup>
- ✓ Two measurement modes:
  - General: Real-time data logging
  - Official: Swiss Regulation SR 941.242 certification

## APPLICATIONS

The Nanoparticle Emission Tester is suitable for a variety of applications, including:

- ✓ Engine exhaust research
- ✓ Combustion emissions research
- ✓ Aftertreatment inspection and maintenance
- ✓ Diesel Particulate Filter (DPF) compliance certification
- ✓ Fleet emissions profiling
- ✓ Particle volatility research

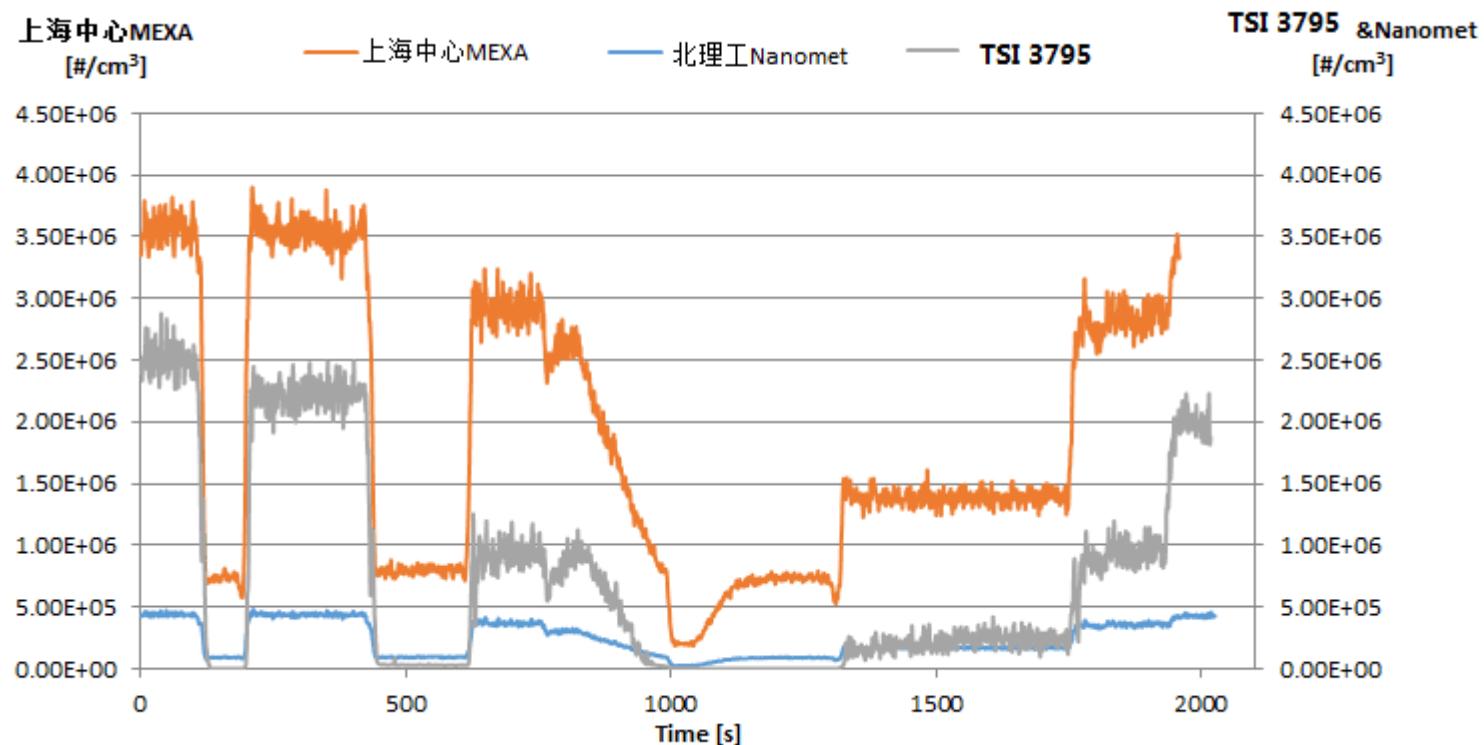

# Comparison of Particle Counters

Parameter	Particle Counters from NMVIC	Particle Counters from VECC	
Equipment Name	HORIBA MEXA-2000SPC S (TSI CPC 100)	TSI CPC 3795	Matter Aerosol Nanomet 3-PS
Measurement Range of Partical Size	23nm~3000nm(3μm)	23nm~1000nm(1μm)	10nm~700nm(0.7μm)
Measurement Range of PN	0~1E4 #/cm <sup>3</sup>	1E3~5E6 #/cm <sup>3</sup>	1E4~3E8#/cm <sup>3</sup>
Removal efficiency of volatile particulate matter	≥99%	> 99% of 30nm	<ul style="list-style-type: none"><li>✓ the sampling tube heated to 300 °C to remove volatile particulate matter,</li><li>✓ the equipment without removal rate indicators</li></ul>
Dilution Ratio	Level1: 10~200 Level2: 15	—	10, 100, 300

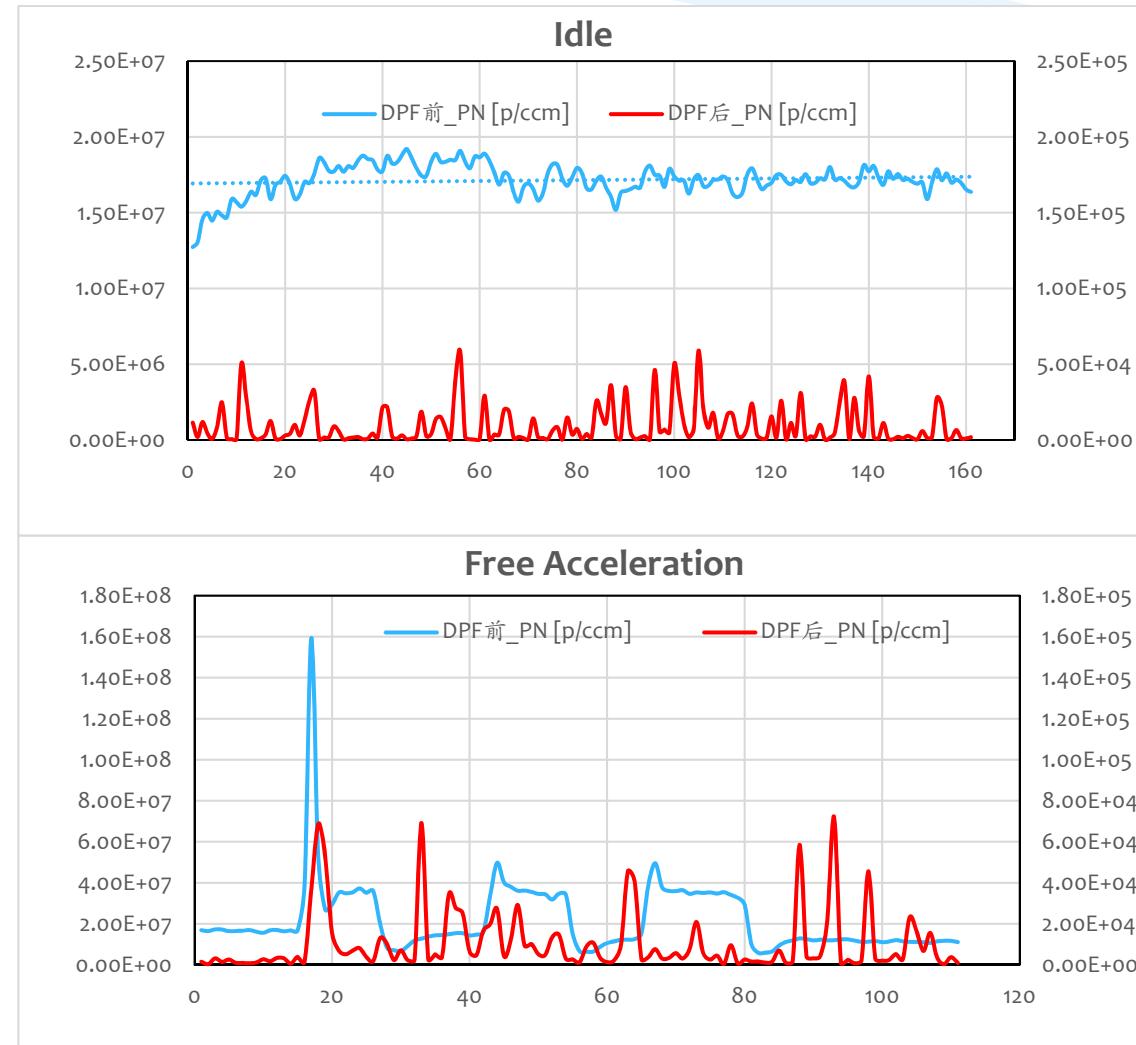

# Comparison of Particle Counters

- \* The experiment was conducted to compare the correlation among Nanomet3, HORIBA MEXA-2000 and TSI 3795. In the steady-state condition, the data trend of the 3 devices is similar, however, the particle numbers measured by the 3 devices vary widely.

# Test Data

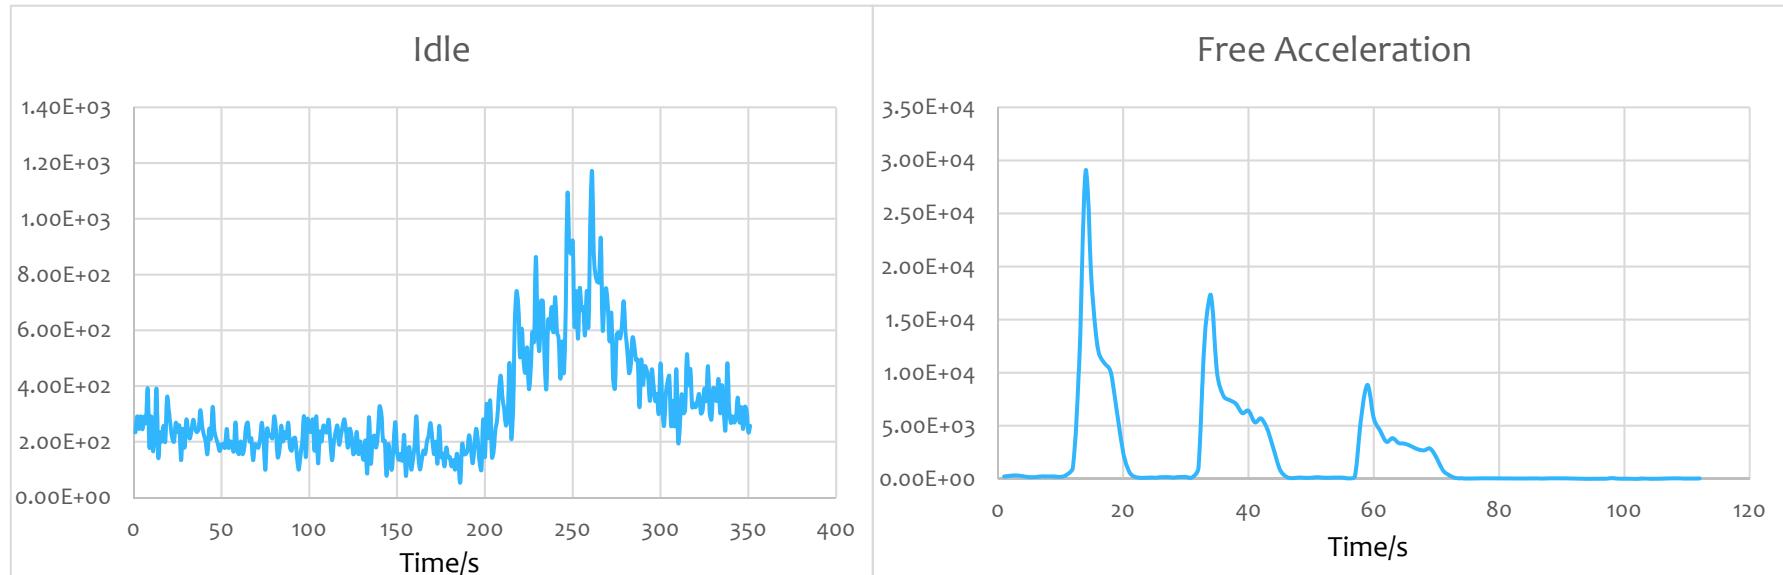

PN efficiency:  
over 99%

粤B.M0302

# Test Data of PN emissions

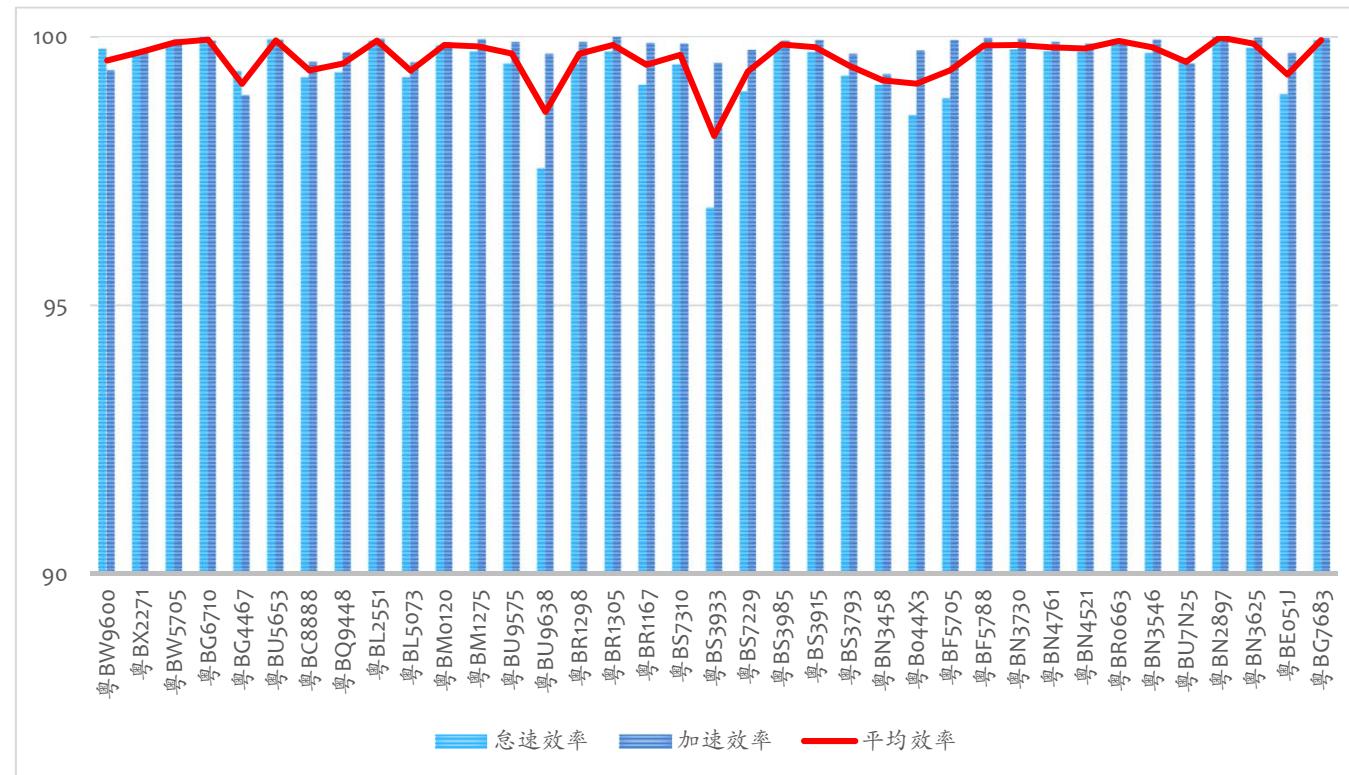

TSI 3795 test data

粤B.M0302

# DPF durability test for PN reduction efficiencies

# DPF product sampling on the market of Shenzhen

- VETC of Xiamen test results:

Reduction efficiencies Comparison between the claims of bidding documents and the sampled products

WHTC Pollutants reduction efficiencies under WHTC cycle	Bidding documents	Product sampled on market test results	differences
CO	96.87%	99.32%	2.45%
THC	100.00%	100.00%	0.00%
NOx	1.28%	3.01%	1.73%
PM	87.24%	98.35%	11.11%
PN	99.65%	99.67%	0.02%

# Some failures

Poor fuel quality leads to injector clogging

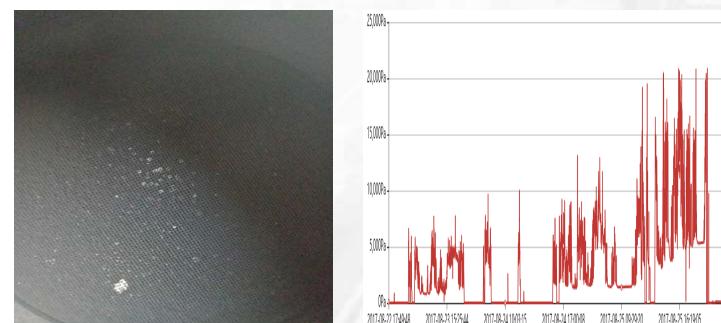

Poor Vehicle conditions

DPF damage during running because the installation dimension outreach the machinery

Passive regeneration DPF unmatched with the vehicles

Front side of a passive Pressure increase regeneration DPF beyond the limits

# Policy Proposal

- Monitoring platform for real-time DPF monitoring is an important mean to ensure the success of the retrofit;
- Understanding of vehicle emission level and driving conditions is necessary for DPF technology choices;
- Local governments need to introduce supportive policies including tax cuts, green freight to encourage retrofit;
- Oil quality assurance during the retrofit process;
- The local need to build a professional team for DPF maintenance.
